

SKU Overview

Table of Content

How does the Simple SKU Generator plugin works?

What are the Letter, Year, Start, End and Stop?

The SKU display page has 2 buttons what are their functions?

How do I upload the SKU CSV file for the products and keep the old SKU?

What happened if I deactivate the plugin or delete the plugin?

How does the Simple SKU Generator plugin works?

The purpose of **Simple SKU Generator** plugin is to create SKU for the products. This will also keep the old SKU and also create new SKU for products that doesn't have SKU. The total numbers of SKU that **Simple SKU Generator** plugin can create is 4,500.

Version 4.8

What are the Letter, Year, Start, End and Stop?

There are 5 **Letters** (A-E).

Each **Letter** has an option to choose 1 of 5 **Years** (2016-2020).

There are 3 **Start** option to choose from (1000-3000).

Each **Start** has 3 option to choose from 3 set of **End**: (1100,1200,1300), (2100,2200,2300), (3100,3200,3300).

If you choose 1000 as **Start** and 1200 as **End**, it is equal to 200 products. $1200 - 1000 = 200$.

If you have less than 200 products then you have to enter the **Stop** number or enter 0 if you have 200.

For example, you choose 2000 as **Start** and 2300 as **End**, it is equal to 300 products. $2300 - 2000 = 300$.

But you only have 213 products on your website. You have to enter 2213 as **Stop** number. At 2213, it will stop creating SKU(s). If you dont do that it will keep generating SKU for no products assign to it

The **Letters, Years, Start & End** will create the SKU.

For the **Stop**, as a reminder you have to enter the total amount of products you have on your website. This will let the **Simple SKU Generator** know how many products you have on the website, the **Stop** number will stop creating SKU.

The image below illustrate what I mention above.

Remove Selected

Export as CSV

Thank you for creating with [WordPress](#).

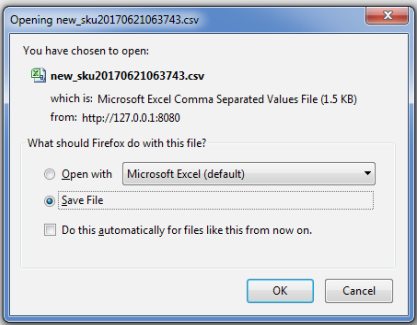

Version 4.8

The Remove button will **ONLY** remove/delete all the SKU from the SKU table not from the Wordpress database.

It won't delete the products on your websites.

It's best to remove the SKU list after you export the CSV that contain th SKU.

The Export CSV button will export the CSV. There will be no header on the CSV file. If you are curious what is the header.

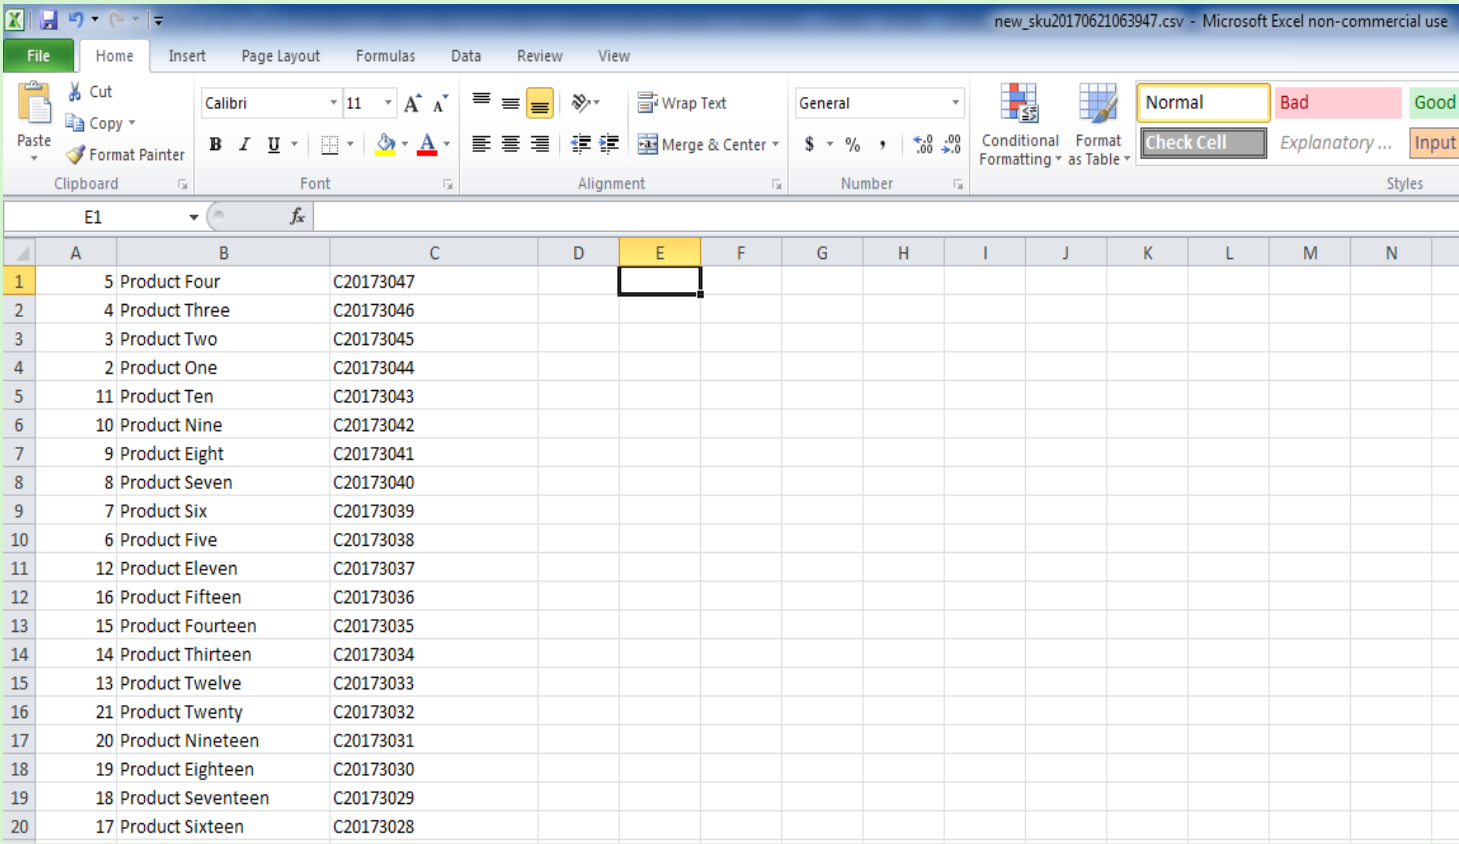

The first column is the **ID**.
The second column is the **post_title**.
The third column is the **sku**.

How do I upload the SKU CSV file for the products and keep the old SKU?

Before you upload the CSV file, you have to backup or export your current products because if you are not sure if you are uploading the CSV file correctly or make a mistake. You can always import the current products CSV file and redo this again correctly.

You have to download a import plugin to upload the SKU CSV file. There are alot of import plugins for woocommerce to choose. I would download and try this import plugin: Woocommerce CSV Import. It's simple to used and understand.

The image below illustrate show how the 3 column looks on the CSV file:

The image shows a screenshot of a Microsoft Excel spreadsheet. The spreadsheet has a header row with columns labeled A, B, and C. Column A contains a list of product names, Column B contains product IDs, and Column C contains product SKUs. The data is as follows:

	A	B	C
1	5 Product Four	C20173047	
2	4 Product Three	C20173046	
3	3 Product Two	C20173045	
4	2 Product One	C20173044	
5	11 Product Ten	C20173043	
6	10 Product Nine	C20173042	
7	9 Product Eight	C20173041	
8	8 Product Seven	C20173040	
9	7 Product Six	C20173039	
10	6 Product Five	C20173038	
11	12 Product Eleven	C20173037	
12	16 Product Fifteen	C20173036	
13	15 Product Fourteen	C20173035	
14	14 Product Thirteen	C20173034	
15	13 Product Twelve	C20173033	
16	21 Product Twenty	C20173032	
17	20 Product Nineteen	C20173031	
18	19 Product Eighteen	C20173030	
19	18 Product Seventeen	C20173029	
20	17 Product Sixteen	C20173028	

I will used the demo SKU products on my website to show you how to upload the old SKU with the new ones.

For example I will keep these 4 old SKU on my website:

A20161003 - Product Forty Eight

A20161007 - Product Forty Three

A20161004 - Product Forty

A20161012 - Product Thirty Eight

The image below show the current SKU on my products section:

<input type="checkbox"/>		Product Forty One	A20161005	In stock (500)	£41.00	Food & Beverages, Home Improvement, Make Up & Fashions	—	<input type="checkbox"/>		Published 48 mins ago
<input type="checkbox"/>		Product Forty	A20161004	In stock (500)	£3.00	Make Up & Fashions	—	<input type="checkbox"/>		Published 48 mins ago
<input type="checkbox"/>		Product Forty Two	A20161006	In stock (500)	£14.00	Food & Beverages, Home Improvement, Make Up & Fashions	—	<input type="checkbox"/>		Published 48 mins ago
<input type="checkbox"/>		Product Thirty Nine	A20161013	In stock (500)	£25.00	Food & Beverages, Home Improvement, Make Up & Fashions	—	<input type="checkbox"/>		Published 48 mins ago
<input type="checkbox"/>		Product Thirty Eight	A20161012	In stock (500)	£13.00	Electronics, Home Improvement, Make Up & Fashions	—	<input type="checkbox"/>		Published 48 mins ago
<input type="checkbox"/>		Product Thirty Seven	A20161011	In stock (500)	£312.00	Food & Beverages, Make Up & Fashions	—	<input type="checkbox"/>		Published 48 mins ago

Now open your CSV file that you export from the **Simple SKU Generator** and add these 4 old SKU(s):

A20161003 - Product Forty Eight

A20161007 - Product Forty Three

A20161004 - Product Forty

A20161012 - Product Thirty Eight

When you open an CSV file, you have to save it twice, it's part of the Microsoft Excel strange procedure.

The image below show before and after the updates in yellow:

Now installed **Woocommerce CSV Import** and open it and make some adjusts for the setting section:

Settings

Allowed Roles

Administrator

Editor

Author

Contributor

Subscriber

Customer

Shop manager

These roles are allowed to import and change settings.

Field separator

,

When you merge products, existing values of the product will be preserved. And only values from the CSV will be imported.

Skip the first row

No

First lines in are often headers you do not want to import.

Add products to all categories

Yes

If you enable this, products will be added to all categories on not only the latest. Example : `cat1->subcat1` , if the option is enabled, the product belongs to both else it will only belong to the sub categorie.

Number of products to process simultaneously

auto

The importing proces works with AJAX calls to avoid timeouts on large CSV files. With this setting you can influence how many rows there are processed every call.

Merge products

Yes

When you merge products, existing values of the product will be preserved. And only values from the CSV will be imported.

Debug

No

When you enable debug, the javascript console will hold more information. IF you encounter problems the debug information may be useful in solving them.

Find product using

Title

When you merge products, products are found by there SKU, this is the unique identifier. In some cases, when you have no SKU, the post title could be used.

Match authors by

ID

When you want the products to belong to a user you can select how the uses must be found. Using the ID, slug, email or login name of the user.

Convert to UTF-08

utf08 encoding

Convert strings to UTF-08 during import?

Follow to location during image import

No

When you import images using an URL, the server sometimes redirects you to the actual path. This settings enabled that you follow that path. If you have safe_mode or open_basedir enabled, disable this setting.

save

Thank you for creating with [WordPress](#).

Version 4.8

Now upload the CSV file to the Headers and Import. The images below show you how:

Headers

[Import](#) | [Headers](#)

Header preview

Fields	Row 1	Row 2	Row 3	Row 4
ID	5	4	3	2

start

Thank you for creating with [WordPress](#)

Version 4.8

Once you upload the CSV file to the **Header**, you have to set the **Fields** as follow:

- The first column is the **ID**.
- The second column is the **post_title**
- The third column is the **sku**.

Then click **save**.

On the **Import** section upload the same file and you will see the **Import Preview** and you will see the **Fields** that you selected.

This is the final stage before it will uploadthe SKU to the website. Now click **start**.

It will display processing bar showing 48 items being upload to the product section

The images below show you how the results before and after updates of the SKU:

This is the old SKU I had on my website.

The **Start** is A20161000
The **End** is A20162000
The **Stop** number is 1048

This is the new SKU I have on my website.

I used a yellow box to mark the old SKU.

The **Start** is C20173000
The **End** is C20173100
The **Stop** number is 3048

What happened if I deactivate the plugin or delete the plugin?

If you deactivate the plugin it will stay on the plugin page and the SKU tables will be still on wordpress database. But if you delete/remove the plugin it will delete the folders, files and also the tables from the wordpress database.
